All Float Drum orders are shipped with
Cellofoam's unique
reflective "FLASH DOT®".
FLASH DOT takes the guess work
out of night docking!

A complete line of Dock Bumpers & Corners,
that are manufactured for maximum shock
absorption, is also available.

PERMAFLOAT® Float Drums offer durable flotation that can be easily applied to any new or existing dock system, whether it be wood, steel or aluminum.

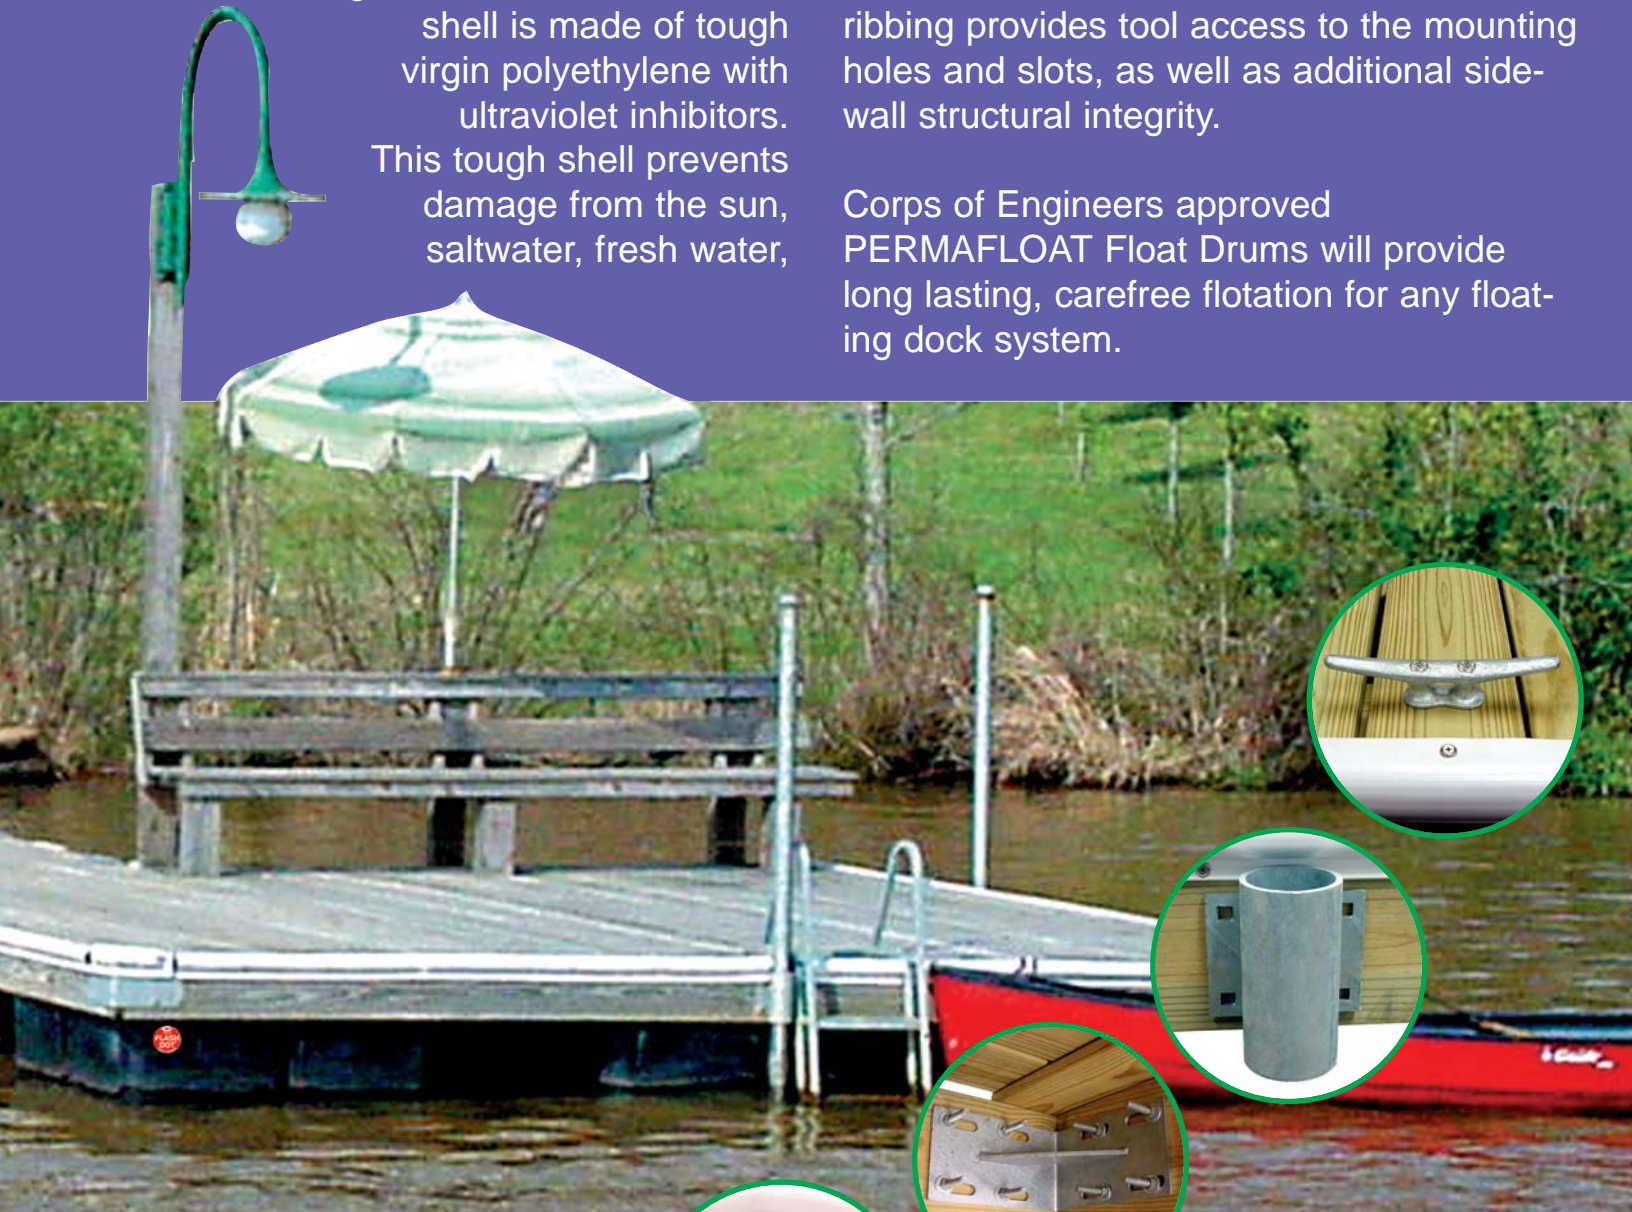

PERMAFLOATs are rotationally molded, eliminating seams that could result in separation and leakage. The .150 nominal thick shell is made of tough virgin polyethylene with ultraviolet inhibitors. This tough shell prevents damage from the sun, saltwater, fresh water,

debris, oil, gas and marine organisms.

PERMAFLOAT is foam filled with CFC/HCFC free expanded polystyrene, providing positive flotation.

PERMAFLOATs are specifically engineered for ease of installation. The extra wide side ribbing provides tool access to the mounting holes and slots, as well as additional side-wall structural integrity.

Corps of Engineers approved PERMAFLOAT Float Drums will provide long lasting, carefree flotation for any floating dock system.

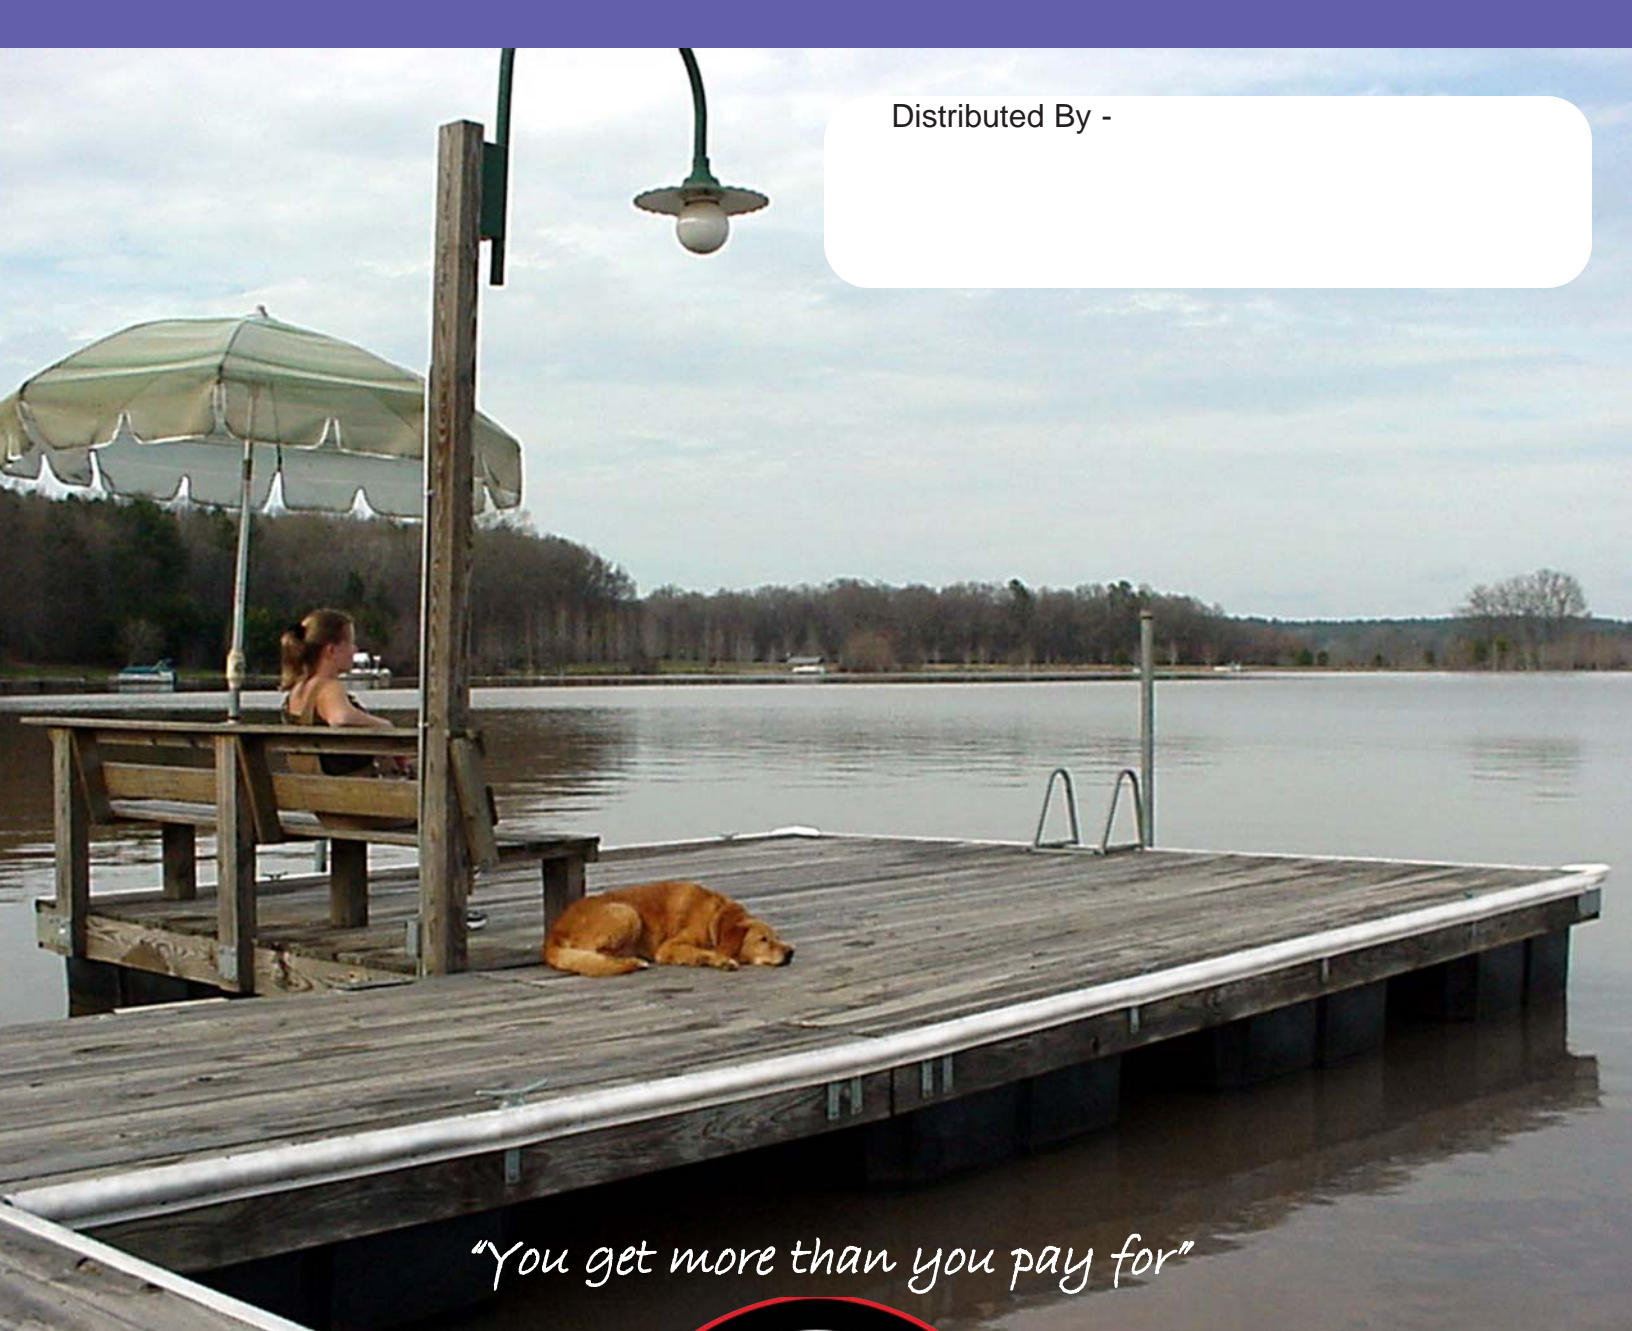

1996 Lake Oconee, Georgia Installation

Dock Hardware

PERMAFLOAT's wide variety of commercial gage galvanized Dock Hardware readily adapts to any size dock configuration.
